**SIMPLE COOKING OF WHOLESOME FOOD
FOR THE FARM HOME**

Compiled by

JESSIE P. RICH

DEPARTMENT OF EXTENSION
DIVISION OF HOME WELFARE

Published by the University six times a month and entered as
second-class matter at the postoffice at
AUSTIN, TEXAS

The benefits of education and of useful knowledge, generally diffused through a community, are essential to the preservation of a free government.

Sam Houston.

Cultivated mind is the guardian genius of democracy. . . . It is the only dictator that freemen acknowledge and the only security that freemen desire.

Mirabeau B. Lamar.

Simple Cooking of Wholesome Food For the Farm Home

No subject on the farm at the present time is receiving so much attention as the proper feeding of the farm animals. The cows are given a measured amount of meal, and succulent material, and the pigs a carefully estimated ration intended to develop a pig best suited to its intended use. How is it with the boys and girls on the farm? Is their food as carefully studied and administered as that of the farm animal? Is it prepared in a way to give the greatest amount of nourishment for the least expenditure of bodily energy? No farm asset is as valuable as its boys and girls, and yet they are more neglected, when it comes to the question of proper food and cooking, than the less important asset—the stock.

USES OF FOODS IN THE BODY.

A human being without a well built body of bony structure and firm muscle is limited in its usefulness. A person unable to move or work is equally limited. Without food, or properly balanced food, a good skeleton or firm muscles and strength to move and work is impossible. Food is expressly taken into the body to make for usefulness and efficiency. It is to build up or repair tissues and to furnish energy either as heat or power to do muscular work.

FOOD MATERIALS AND THEIR SPECIFIC USES.

The food materials are of great variety, but an analysis of these materials shows that all are but varying combinations of a few simple food substances, just as all of our various English words are made of twenty-six letters. These basic food substances are carbohydrates which include starch, sugar, proteins, fats, and mineral salts. The starches are well known substances and occur in such vegetables and cereals as potatoes, rice, wheat, corn, and oats. Sugar is largely used in the commercial form, but occurs also in fruits and vegetables and even in some animal products in small quantities. These substances are especially suited to furnish the heat and energy required by the body. The protein materials are found especially in the

egg, the lean of meat, milk, nuts, fish, etc. This is the substance necessary to build the muscular tissue of the body. The fats are easily recognized and are obtained mainly from cream, butter, salad oil, nuts, and the fat of meats, and furnish heat and energy. The mineral salts are found in many foods, especially milk, green vegetables, cereals, and fresh fruits. They are particularly necessary to the growth of the bones and teeth, and are necessary constituents to the blood and body fluids.

NECESSITY OF COOKING FOOD.

Man is defined as the cooking animal, and many of his foods are cooked to make them more palatable, easier of assimilation, and to destroy parasites. Many foods are, however, spoiled by cooking and largely because of the fact that these different food substances require different degrees of heat for their best preparation. People are as a rule ignorant both of the substances composing food materials and of the temperature at which each of these substances should be cooked.

TEMPERATURE BEST SUITED TO COOK THE FOOD SUBSTANCE

For the best preparation of protein, starch and fatty foods, there is a desirable range of temperature. In the case of eggs and cheese, typical examples of protein or tissue building substances, the cooking demands a knowledge of the effects of different temperatures on proteins. To determine the effect of heat on egg, put a slightly beaten egg into a buttered sauce pan and place over a slow fire, stirring constantly until the mass is like a soft jelly. Now allow more heat to reach the egg and notice the result. The egg becomes hard and tough. The same is true of cheese. A high temperature applied to all forms of protein causes them to toughen and harden and become difficult to digest, while a lower temperature—a temperature below the boiling point—gives a delicate, easily digested food. Though recipe books still speak of boiled eggs and boiled custards, the method of preparation should not be by boiling, but by the use of heat which is below the boiling temperature. The reason custards curdle is because the egg has been cooked at too high a temperature.

On the other hand, starches and foods containing starch require a high temperature in order to break up the starch grains

and make them ready for digestion. This temperature in moist heat would be what we call the boiling point, 212 degrees Fahrenheit, or long cooking below the boiling point, or in dry heat, what we term a hot oven, from 350 to 430 degrees F. From this we see that potatoes and cereals must be cooked at a high temperature. On the other hand, fats must not be cooked at too high a temperature as in this case the fat splits up and changes into substances which are irritating to the lining of the stomach. A dark coloring of the fat indicates this splitting. Therefore browned butter or very crisp-brown bacon is hard to digest. It is because of this fact, that we find one of the great objections to fried foods or other foods fried in fats.

The object of this bulletin is to take up the simple every-day foods (especially those found in the rural home), indicate their composition, and give the methods of preparation which will best fit these foods for consumption. For further details on Use of Foods and Meat Cookery, see Bulletins Nos. 276-278 issued by the Home Welfare Division of the Extension Department, University of Texas, and the Farmers' Bulletins.

MILK AND CHEESE.

Milk—Hot Milk.—If milk is to be cooked or served hot, it should not be brought to the boiling point, but only to 140°-180° F. A convenient method of heating it is in the double-boiler.

Cottage Cheese Made from Milk.—Use freshly soured clabbered milk, or clabbered buttermilk. Pour milk in a bag to drip or heat slowly in a double boiler or on the back of the stove, stirring occasionally from the bottom. If cooked it must not get too hot as it is a *protein* substance. When the curd is set, pour into a bag and allow to drip for some minutes. Then remove the cheese from the cloth and soften with cream or melted butter and season with salt. This may be served as a cheese or with salad dressing as a salad.

Cottage Cheese Pudding.—Two cups of cheese curd as made by the above recipe, a half cup of sugar, and half cup of English currants, one-fourth cup of bread crumbs, one-fourth cup of melted butter, two eggs lightly beaten. Stir together all these materials and bake as a custard in a slow oven.

American Cheese.—*Cheese on toast.* (A protein substance.) Cut one-half pound of cheese in small pieces and put into a double boiler. When this is melted, add one-half cup of heated milk, one-half teaspoon of salt, and stir. Then add three eggs well beaten, and cook lightly until the consistency of custard. Serve at once on hot toast or crackers.

Cheese and Rice.—Boil one-half cup of rice until thoroughly tender in salted *boiling* water. (Rice is a starchy food.) Drain. Now make a cream sauce, using one pint of milk, four tablespoons of butter and four tablespoons of flour. Heat the butter, stir in the flour, and cook a few minutes (be careful not to burn), then add the milk, heated. Boil for three minutes and season with one teaspoon salt. Put bits of butter in the bottom of a baking dish or pan, add about half the rice, a generous sprinkling of grated cheese, and about half the cream sauce. Repeat this, beginning with the butter, rice, cheese, and cream sauce. Cover with bread crumbs and brown in a hot oven. Serve at once.

EGGS. (PROTEIN FOODS.)

Soft and Hard Cooked Eggs.—Put on the stove a stew pan containing as many cups of water as there are eggs to be cooked. When the water is boiling, put the eggs in carefully with a spoon, cover stew pan, and set on back of stove where it will keep hot *but not boil*. Leave from five to seven minutes for soft-cooked eggs, from forty to forty-five minutes for hard-cooked. If the eggs are very cold when put into the water they take longer to cook than if they are not. In this way eggs are cooked at a low temperature, and are more digestible than if boiled.

Poached Eggs.—It is easiest to poach only two or three eggs at a time. Have ready a shallow pan two-thirds full of boiling salted water, allowing one-half teaspoon of salt to one quart of water. The eggs should be very carefully slipped into the water so as to have good shape when cooked. The water should cover the eggs. When there is a film over the top, and the white is firm, remove with perforated skimmer to pieces of buttered toast, and let each person season his own egg. Only fresh eggs can be poached successfully.

Omelet.—To four eggs add four tablespoons water, one-half teaspoon salt, and one-eighth teaspoon pepper. Mix all thoroughly. Heat a perfectly smooth frying pan. Put in a tablespoon of bacon grease or butter. When hot pour in eggs. As soon as they have begun to cook, lift from bottom and sides of pan with a spatula or knife, allowing the uncooked parts to run under the cooked. Never allow to stick or burn. When evenly cooked, but not hard, remove from fire. Run the knife along the edge, loosening the omelet from the sides of pan. Taking the handle of the pan in the left hand, and tilting the pan from you, begin to roll the omelete with the knife from the side on which the handle is. When the omelet is rolled, hold the knife over it, and by inverting pan over the platter, let it fall gently to platter. Milk, cream, or left-over gravy may be used instead of water in omelet. Milk tends to make a tough omelet. The same may be used to make scrambled eggs, which are better if they have water or milk added than if the eggs are used alone.

Omelet may be covered with grated cheese or finely chopped chicken before being rolled. Peas or asparagus may be heated in white sauce and served on the same platter with omelet, or tomato sauce may be poured around.

Rich Omelet.—Two and one-half tablespoons flour, three-fourths teaspoon salt, three tablespoons butter, one cup milk, three eggs.

Melt butter, add flour and cook two minutes, being careful not to burn. Add heated milk gradually, stirring continually. Boil three minutes and cool. Separate eggs, add salt to whites and beat until stiff. Fold in yolks and cream sauce. Cook slowly as any omelet, occasionally picking through with a fork to allow the uncooked top to reach the bottom.

Stuffed Eggs.—Cut four hard cooked eggs in halves, cross-wise, remove yolks, mash, and add to them two tablespoons grated cheese, one teaspoon vinegar, one-fourth teaspoon mustard; salt and pepper to taste. Add enough melted butter to make the mixture the right consistency to shape. Make balls size of original yolks and refill whites. Arrange on serving dish and garnish with parsley. If desired hot, arrange in shallow

baking dish, pour over them one cup white sauce, and reheat. Do not bake, as the eggs will become very indigestible.

MEATS.

(For fuller detail in cooking tough meat, see Bulletin No. 278, Extension Department, University of Texas.)

Time Required for Cooking Meats.

Kind of meat	Weight lbs. (about)	Boiling		Baking	
		Hours	Hours	Hours	Minutes.
Mutton (leg)	5.	2-3	1		45
Ham	12-14	4-5			
Corned beef	5	3-4			
Turkey	9	3-3½	2½-3		
Chicken (spring) . . .	2½	1	1-1½		
Chicken (old)	4	3-4	2-3		
Roast beef (rare)	5		1		5
Tongue		3-4			
Roast beef (well done)	5		1		20

Four General Methods.—There are four general methods of cooking meat: roasting, broiling, boiling and frying. The proper method to use depends on the cut of the meat and the result desired. In broiling and roasting the object is to retain in the meat all of its juices. This is accomplished by cooking it for a short time at a high temperature to sear the outside so as to hold in the juices, and then finishing the cooking at a lower temperature to soften the connective tissue. Meat may also be boiled for a few minutes to sear the cut surface and then cooked at a lower temperature. Or it may be put into cold water and slowly brought to the boiling point for soup stock. In the latter case the object is to get the juice out of the meat into the water.

Broiled Steak.—Steak that is to be broiled should be tender. Trim off the outside skin and superfluous fat, and wipe the steak with a cloth wrung out of cold water. Grease a hissing hot griddle with a very little of the fat from the steak. Place the steak on the griddle and turn every few seconds for the first minute. Do not stick the fork into the lean, juicy part, as the juice will leak out of the hole thus made. After the steak has begun to brown, reduce the heat and finish cooking with a slow

fire, turning occasionally. Steak one inch thick will require six minutes if liked rare, seven or longer if liked well done. Sprinkle with salt on both sides and pepper if desired, place on a hot platter, spread with butter, and serve on warm plates. Steak may be broiled on a broiler directly over a bed of live coals, or under a gas flame.

To Cook Tough Steak.—Take a round or other tough steak of an inch or more in thickness, trim, clean, and lay on meat board. Gash with a knife, sprinkle with salt, and pour on it one-half cup of flour. With the edge of a kitchen plate work the flour in the meat. Heat a skillet, rub with a little fat, and brown the steak on both sides. Then add a cup of boiling water and cover skillet with a close-fitting lid. An iron or other heavy object may be put on the lid to keep it on tight so that the steam will not escape. Let steak cook slowly, but not boil, for an hour, or until tender. Serve with the gravy on a hot platter. Onion may be added with the water if desired.

Hamburg Steak.—Chop finely one pound lean raw beef; season highly with salt, pepper, and a few drops of onion juice or one-half shallot finely chopped. Shape, cook, and serve as meat Cakes. A few gratings of nutmeg and one egg slightly beaten may be added.

Roast.—Wipe off meat with cloth wrung out of cold water, rub in salt and pepper, and dredge with flour. Place in roaster or pan and put in oven hot enough to cook the outside very quickly, or sear it on top of stove and then put into the oven. Reduce heat and baste every ten minutes with fat that is tried out. If the roast is very lean it may be necessary to add fat. When meat is half done, turn it over and dredge with flour that this side may be uppermost for final browning. If there is danger of flour burning, add a little water. A five-pound roast requires one hour and twenty minutes to be well done. When roast is done take up on hot platter. Pour off all grease from pan but about four tablespoons. To this add four tablespoons flour, mix thoroughly, and add one and a half cups boiling water. Boil well, season with salt and pepper.

Pot Roast.—Prepare meat as above. Heat an iron pot, and

rub with a little fat. Brown meat on all sides in the pot, add an onion and a cup of boiling water. Cover the pot closely and cook very slowly (below the boiling point) until meat is tender. A four-pound roast requires three to four hours. Turn the roast once during the cooking and add more water if necessary. Make gravy as above. After such a roast is seared, it may be finished in a fireless cooker instead of as above directed.

Mutton Stew.—Wash and cut into pieces two pounds of neck or shoulder pieces of mutton. Put meat and bones into kettle with two quarts of water, and bring quickly to the boiling point. Remove to back of stove and cook slowly for $1\frac{1}{2}$ to 3 hours, or until the meat is tender. Add carrots, turnips, onion and potato, cut into small pieces. Cook until the vegetables are tender. Thicken the liquid with flour mixed with water.—(2 cups flour to each cup liquid.) Season and serve.

Boiled Leg of Mutton.—Remove entirely the thin outer skin but not the fat from the mutton. Place in kettle, and cover with boiling water. Bring quickly to boiling point, boil five minutes, and skim. Set on back of range and simmer until tender. When half done add one tablespoon of salt. If desired brown, take out of water when tender, put in a hot oven for a few minutes and serve as roast. If not browned, serve with a white sauce. In making the sauce, instead of using milk, use one-half milk and one-half mutton stock (the water in which the mutton was boiled). Into the sauce put two finely chopped hard cooked eggs.

Liver and Bacon.—Cut liver one-fourth to one-half inch thick, let lie in cold water a few minutes, scald, drain, and remove skin and veins. Sprinkle with salt and pepper and dredge with flour. Brown in a little bacon grease. Add one small onion chopped fine and three-quarters of a cup of boiling water. Cover and let simmer fifteen minutes. Serve with bacon cut thin and cooked crisp, but not too brown.

Chicken Pie.—1. Dress, clean, and cut a good-sized fowl. Put in a stew pan, cover with boiling water, and cook slowly until tender, having added a lump of butter and salt and pepper to taste. Place the stewed chicken in a baking dish, add two

tablespoons of butter in small pieces, a bit more salt, and a teaspoonful of chopped parsley leaves if liked. Make a batter with a cup of milk and two tablespoons of flour. Pour this into the liquor in the stew pan in which the chicken was cooked and bring to the boiling point. Pour this gravy on the chicken in the baking dish. Sift a pint of flour, a half teaspoon of baking powder, and a teaspoon of salt. Mix with this a cup of lard, add enough milk to make a soft dough. Roll one-fourth inch thick, cut into diamonds, place over the contents of baking dish, bake quickly and serve.

Chicken Pie.—2. Pick the left-over chicken off the bone. Make a cream sauce (two cups milk, four tablespoons butter and four tablespoons of flour), add any left-over chicken gravy and the chicken. Heat, season, and turn into a baking-dish. Cover with a baking powder biscuit dough crust about one-eighth inch thick, allowing the crust to rest on the edges of the pan. Cut two slits through the top of the crust to allow the steam to escape.

Recipe for Crust.—One pint of flour, four teaspoons baking powder, two to four tablespoons of fat, one-half teaspoon salt, three-fourths cup liquid. Mix as for baking-powder biscuit.

Braised Beef.—Three pounds beef from lower part of round or face of rump, two thin slices of fat salt pork, one-half teaspoon peppercorns, carrot, turnip, onion, celery (one-fourth cup each, cut in dice), salt and pepper.

Try out pork and remove scraps. Wipe beef, sprinkle with salt and pepper, dredge with flour, and brown entire surface in pork fat. When turning meat, avoid piercing with fork or skewer, which allows the inner juices to escape. Place on rack in deep granite pan or in earthen pudding dish, and surround with vegetables, peppercorns, and three cups of boiling water; cover closely, and bake four hours in very slow oven, basting every half hour, and turning after second hour. Throughout the cooking, the liquid should be kept below the boiling point. Serve with gravy made from liquor in pan.

Irish Stew with Dumplings.—Wipe and cut in pieces three pounds of mutton from the fore-quarter. Put in kettle, cover with boiling water, and cook slowly two hours or until tender.

After cooking one hour, add one-half cup each of carrot and turnip cut in one-half inch cubes, and one onion cut in slices. Fifteen minutes before serving add four cups potatoes cut in one-fourth inch slices, previously parboiled five minutes in boiling water. Thicken with one-fourth cup flour, diluted with enough cold water to form a thin smooth paste. Season with salt and pepper. Serve with dumplings.

Dumplings.—Two cups flour, four teaspoons baking powder, three-fourths cup milk, one-half teaspoon salt, two teaspoons butter. Mix and sift dry ingredients. Add butter and milk gradually, using a knife for mixing. Drop by spoonfuls on top of stew, being careful that the dumplings rest on meat and potato and do not settle into the liquid.

To Stuff Poultry.—Put stuffing by spoonfuls in neck end, using enough to sufficiently fill the skin, that bird may look plump when served. Where cracker stuffing is used, allowance must be made for swelling of crackers, otherwise skin may burst during cooking. Put remaining stuffing in body; if the body is full, sew skin; if not full, bring skin together with a skewer.

Stewed Chicken with Onions.—Dress, clean, and cut in pieces for serving, two chickens. Cook in a small quantity of water with eighteen tiny young onions. Remove chicken to serving-dish as soon as tender, and when onions are soft drain from stock and boil stock down to one and one-half cups. Make sauce of three tablespoons butter, four tablespoons flour, the stock and one-half cup heavy cream; then add yolks three eggs, salt, pepper, and lemon juice to taste. Pour sauce over chicken and onions.

Roast Chicken.—Dress, clean and stuff chicken. Place on its back on rack in a dripping pan, rub entire surface with salt, and spread breast and legs with three tablespoons butter, rubbed until creamy and mixed with two tablespoons flour. Dredge bottom of pan with flour. Place in a hot oven, and when flour is well browned, reduce the heat, then baste. Continue basting every ten minutes until chicken is cooked. For basting, use one-fourth cup butter, melted in two-thirds cup boiling water, and after this is gone, use fat in pan, and when necessary to

prevent flour burning, add one cup boiling water. During cooking, turn chicken frequently, that it may brown evenly. If a thick crust is desired, dredge bird with flour two or three times during cooking. If a glazed surface is preferred, spread bird with butter, omitting flour, and do not dredge during baking. Cook until tender. A four-pound chicken requires about one and one-half hours.

Stuffing.—One cup dry bread crumbs, two teaspoons butter, one-fourth cup boiling water, salt and pepper.

Melt butter in water, and pour over crumbs to which seasonings have been added. Onion juice, sage, summer savory, or chopped celery may be added.

Baked Ham.—Cut a slice across the thick part of the ham about one inch thick. Put in pan or skillet. Cover with milk and bake in a moderate oven one to one and one-half hours, or until the meat is tender. The milk should not be hot enough to boil during the cooking.

Boiled Ham.—Wash well a smoked ham. Soak over night in water to which some milk has been added. Remove from water, cover with cold water, bring to a boil and boil 25 minutes. Put on back of stove where water will not boil and cook 15 minutes for each pound of ham. *Uncover and allow the ham to get cold in the water in which it was cooked.

Ham Pie.—Use cold chopped ham. Put bits butter in the bottom of a baking dish. Add layers of mashed potato and ham, alternately, beginning and ending with the potato. Brown in oven and serve. Rice may be used in place of the potato, in which case a little moisture should be used—milk, water with a little butter, or stock.

Ham for Sandwiches.—Chop the cold boiled ham. Add cooked salad dressing and chopped pickle. Use for sandwich filling.

Bacon.—Cut bacon into thin slices. Put in heated frying pan and panbroil until it is a very light brown. It should not get very brown and crisp as that makes it indigestible. The fat which fries out can be used in other cooking.

Pork Sausage (Home-made).—Grind up the shoulder of pork and some lean of beef. Use 1 pound beef to every 3 pounds pork. Season with salt and shape into flat cakes. Panbroil.

Pork Loaf.—One-half pound boiled salt pork cut into small cubes. Two cups breadcrumbs, two eggs, one cup milk, or enough milk to moisten the mixture, one teaspoon salt. Mix together and bake in a moderate oven. Serve hot or cold.

Pigs in Blankets.—Cut boiled salt pork into thick slices. Roll in crumbs, dip in egg, roll in crumbs and fry in deep fat, or bake until brown in the oven.

LEFT-OVER MEAT.

There are many palatable ways of using left-over meat. It is well to remember that cooked meat does not require further cooking, but merely reheating. Cooked-over food is less digestible than freshly cooked.

Baked Hash.—Grind or chop pieces of left-over meat, mix with gravy, tomato sauce, or white sauce, and put into a buttered baking-dish which has been lined with mashed potatoes or rice. Set dish in pan of hot water, heat in a moderate oven. Serve in baking-dish.

Hash on Toast.—Instead of baking, heat hash in gravy or sauce and serve on toast.

SOUPS.

Chicken Bone Soup.—Wash the chicken bones, break the heavy ones, and cover well with water. Cook slowly for several hours. One may also use the feet and legs of chickens which have been scalded and skinned. Bits of dried bread, onions, and tomatoes may be added for flavor. When the soup is well cooked, strain and add cooked rice or noodles, and serve.

How to Make Meat Soup.—In using meats to make soup we wish to extract all the juices from the meat. To do this, cut the meat into small pieces, soak in cold water one hour, put the meat in this same water over the fire, bring very slowly to the boiling point, set on back of stove and let simmer until meat drops to pieces. If meat is allowed to boil, the proteins are hardened on the outside, the juices cannot be extracted, and the

soup will lack flavor. Vegetables, spices, and salt should be added the last hour of cooking, potatoes the last half hour. Soups made in this way can be very successfully cooked in the fireless cooker after being brought to the boiling point on the range.

Formula for three pints of standard stock (beef, veal, chicken, mutton, or game): four pounds meat (one-fourth bone), four pints cold water, one and one-half teaspoons salt, ten or twelve peppercorns, sprig parsley, one-fourth of a sweet pepper, one and one-half tablespoons each chopped carrot, onion, celery, turnip. Make according to directions above.

Seasonings and vegetables may be varied to suit individual tastes. If allowed to cool, the fat is easily removed by laying gently a piece of tissue paper over the surface. The fat will adhere to the paper. This stock may be strained and kept for a short time, usually not more than a day in summer. When desired to use add whatever vegetables are liked.

Cream Soups.—A cream soup consists of a combination of meat or vegetable pulp and white sauce thinned as desired. Almost any vegetable, fish, or chicken may be used in a cream soup. When vegetable is cooked tender rub through a sieve, moistening now and then with water in which it was cooked to make it go through strainer faster. Flour is used to bind the vegetable pulp and the liquid, thus giving the soup a smooth consistency. If butter is not used, the flour may be mixed with a little of the cold liquid and added to the hot soup. If butter is used, cream it and the flour together and then add to the soup. In either case the soup should be boiled after the flour is added.

Cream of Tomato Soup.—One pint tomatoes, two teaspoons sugar, one-eighth teaspoon soda, one quart milk, one-third cup butter, one slice onion, four tablespoons flour, one teaspoon salt, one-eighth teaspoon pepper.

Heat tomatoes and rub through a sieve. Add sugar, soda, flour and butter rubbed into a paste. Boil five minutes. Scald milk with onion in it, remove onion, and add to the thickened tomato. Reheat, but do not boil. Salt just before serving.

Baked Bean Soup.—Three cups cold baked beans, three pints water, two slices onion, one and one-half cups stewed and strained tomatoes, two stalks celery, two tablespoons butter, two tablespoons flour, one tablespoon chili sauce, salt, pepper.

Put beans, water, onion, and celery in sauce pan; bring to boiling point and simmer thirty minutes. Rub through a sieve; add tomato, chili sauce, season to taste with salt and pepper, and bind with the butter and flour cooked together. Serve with crisp crackers.

Corn Soup.—One can corn, one pint boiling water, one pint milk, one slice onion, two tablespoons butter, two tablespoons flour, one teaspoon salt.

Chop the corn, add water, and simmer twenty minutes; rub through a sieve. Scald milk with onion in it, remove onion, and add milk to corn. Bind with butter and flour cooked together. Add salt.

Potato Soup.—Three medium sized potatoes, one quart milk, two slices onion, three tablespoons butter, one and one-half teaspoons salt, two tablespoons flour.

Cook potatoes in boiling salted water; when soft, rub through a strainer. Scald milk with onion in it, remove onion, and add milk slowly to potatoes. Melt the butter, add dry ingredients, stir until well mixed, then stir into boiling soup; cook one minute. Season and serve.

GENERAL DIRECTIONS—VEGETABLES.

The cooking of vegetables depends largely upon their composition. For example, potatoes contain such a large amount of water that they have sufficient in them to swell starch grains and cook the starch thoroughly. They may be cooked, therefore, as in baking, without the addition of any water. Rice, on the contrary, contains only a very small per cent of water, and it is necessary to add a very large amount while cooking it. Old vegetables contain a tough, woody fibre, and they require long cooking to soften this fibre, while young vegetables have very tender fibre which is easily softened and broken down by heat.

Dried vegetables usually require longer cooking than fresh ones. They should be thoroughly washed and soaked overnight

before cooking. They should then be cooked in the water they have been soaked in.

All vegetables should be carefully picked over, the bruised and decayed spots discarded, and vegetables thoroughly washed before cooking. The fresher the vegetables the better the flavor. When possible, gather young green vegetables just before cooking so they will not become wilted.

It is better to wash the pods of green peas before shelling, instead of washing the peas. More of the flavor is retained in this way. A handful of fresh young pods added to the peas while cooking gives them a delicious flavor. They should be removed before the peas are served.

Cabbage and cauliflower should be soaked for an hour in salt water or in water to which a little vinegar has been added before cooking. If there are any worms or other insects in them they will crawl out.

Potatoes should be pared as thinly as possible. The most valuable mineral in the potato lies just beneath the skin, and this is entirely lost when a thick paring is removed.

All vegetables should be put into boiling water and then boiled or simmered until tender. Potatoes and cauliflower should be boiled gently, as rapid boiling is likely to break down the outside before the center is done.

Strong-flavored vegetables, such as cauliflower, cabbage, onions and mustard greens, should be cooked with the cover entirely removed from the vessel, and allowed to cook just below the boiling point. There is no odor to cooking vegetables when cooked this way.

Green peas and beans should be boiled gently until practically all the water in which they were cooked has evaporated. Much of the valuable mineral matter in vegetables is dissolved in water. If the water is poured off, the mineral is wasted.

It is essential that all vegetables be cooked thoroughly done. Some vegetables are digestible raw, most are digestible when thoroughly done, but none are digestible when half or two-thirds cooked.

Salt and melted butter make the best seasoning for most vegetables, but by way of variety a white sauce may be used on almost any vegetable—peas, beans, carrots, potatoes, cauliflower,

cabbage, asparagus, etc. Vegetables cooked for long hours in the pot with pork (as pork and cabbage, pork and string beans) and served with the grease over them are indigestible, because they become coated with a film of fat which interferes with the digestion of the stomach.

White Sauce.—Two tablespoons butter, two tablespoons flour, one cup milk, one-half teaspoon salt.

Melt butter, add flour, and cook for two minutes. Be careful not to burn or brown. Add heated milk, and bring to boiling point. Add salt. Thick sauce is made by using four tablespoons flour, and a thin sauce by using one tablespoon of flour.

Tomato Sauce.—This is made in the same way as white sauce, except that a cupful of tomato juice made by cooking and straining tomatoes, is used instead of milk.

Boiled Rice.—Pick over a cupful of rice. Wash in several waters until water is clear. Have on stove a large vessel containing two quarts of boiling salted water. Add rice slowly so as not to stop the boiling. Boil from fifteen to thirty minutes, or until rice is tender. Do not stir while cooking. Drain in coarse strainer, and pour through rice one quart of hot water, return to stew pan in which it was cooked, cover with a cloth, place on back of range to dry. In this case the rice kernels should be distinct. Rice may be started in boiling water and after a few minutes milk added and the cooking finished in a double boiler. In this case the kernels will not be distinct, but the rice will be richer in nutritive value.

Grits.—They should be started in boiling water, one cup of grits to four cups of boiling water, directly over the fire, and finished in the double boiler, or by setting the stew pan in a vessel of boiling water. In this way there is no danger of its burning.

Baked Rice.—One cup of cooked rice, three-quarters cup of white sauce, or sauce made from meat stock, two tablespoons grated cheese. Mix, put in a buttered baking dish, sprinkle with more grated cheese. Heat in moderate oven. Serve in baking dish.

Waldorf Potatoes.—Cut cold boiled potatoes into cubes and mix one cup of potatoes with half a cup of white sauce, having

previously mixed in the same sauce four tablespoons of grated cheese. Put in a buttered baking dish, cover with bread crumbs, heat in oven until crumbs are light brown. Serve in baking dish.

To butter crumbs, melt a little butter and put crumbs into it. Don't heat to a high temperature. (Two teaspoons butter to one cup crumbs.)

Potato Omelet.—Prepare mashed potatoes, turn in hot omelet pan greased with one tablespoon butter, spread evenly, cook slowly until browned underneath, and fold as an omelet.

Escalloped Potatoes.—Wash, pare, soak, and cut four potatoes in one-fourth inch slices. Put a layer in buttered baking dish, sprinkle with salt and pepper, dredge with flour, and dot over with one-half tablespoon butter. Repeat, put in a few slices of onion, if desired. Add hot milk until it may be seen through top layer, bake one and one-fourth hours or until potato is soft.

Glazed Sweet Potatoes.—Wash and pare six medium-sized potatoes. Cook ten minutes in boiling salted water. Drain, cut in halves lengthwise, and put in a buttered pan. Make a syrup by boiling, three minutes, one-half cup sugar, four tablespoons water, and one tablespoon butter. Brush potatoes with syrup and bake forty minutes, basting twice with remaining syrup.

Left-Over Vegetables are not as desirable as left-over meats. They lose much of their value by standing. The best way to use them is in salad. Almost any left-over vegetable makes a good salad. See page 20 for salads.

TABLE FOR COOKING THE COMMON VEGETABLES.

Kind.	Time of Cooking.
Asparagus.....	About 30 minutes.
Beans—	
Lima.....	1-1½ hours
String.....	2-3 hours
Beets—	
Young.....	1 hour
Old.....	3-4 hours
Corn, green.....	10-15 minutes
Carrots, young.....	30 minutes to 1 hour
Cabbage.....	30-40 minutes (simmer)

Kind.	Time of Cooking.
Cauliflower.....	20-30 minutes (simmer)
Onion.....	45-60 minutes (simmer)
Okra.....	20-30 minutes
Potatoes.....	20-30 minutes
Celery.....	20-30 minutes
Spinach.....	25-30 minutes
Peas, green.....	30-40 minutes
Squash.....	30-40 minutes
Turnips.....	1-1½ hours
Tomatoes.....	10 minutes

SALADS.

Made of Left-Over Vegetables.—Left-over vegetables such as peas, beans, carrots, asparagus, etc., should have the butter rinsed off and be served cold as salads. Peas and carrots or peas and beets mixed make good salads. Cover with French dressing or cooked dressing.

Lettuce may be served with either French or boiled dressing. It can be varied by sprinkling with grated raw carrots. Lettuce and hard-cooked eggs with either dressing make a good salad.

Coleslaw.—One-half small head of hard cabbage, one cupful cooked dressing. Soak cabbage in cold water thirty minutes. Shred fine and mix with dressing.

French Dressing.—One-half teaspoon salt, one-fourth teaspoon pepper, six tablespoons olive oil, two to four tablespoons vinegar or lemon juice, a few grains cayenne.

Mix dry materials, add oil, and when mixed add the acid a little at a time. Beat until an emulsion is formed. Pour over the vegetables with which it is to be used, and mix same until dressing is distributed. A few drops of onion juice or finely chopped onion may be added to dressing if desired.

Cooked Dressing, I.—One-fourth teaspoon salt, one-fourth tea spoon mustard, one-fourth teaspoon sugar, two egg yolks, two teaspoons butter, three-fourths cup thin cream or milk, two tablespoons vinegar, a few grains cayenne.

Mix dry ingredients, add egg yolks, beat until well mixed, add butter and milk. Cook over hot water, stirring until thickened

slightly, then add gradually the vinegar, stirring all the while. Set aside to cool.

Cooked Dressing, II.—Three tablespoons butter, two tablespoons flour, one cup milk, three eggs, one teaspoon salt, one teaspoon sugar, one teaspoon mustard, one-half cup vinegar.

Make cream sauce of milk, butter and flour. Scald vinegar and pour over the seasonings. Beat the eggs and add the heated vinegar and seasonings. Combine this with the cream sauce and cook until it thickens over hot water. Cool.

Hot Potato Salad.—Wash six medium sized potatoes, and cook in boiling salted water until soft. Cool, remove skins, and cut in very thin slices. Cover bottom of baking dish with potatoes, season with salt and pepper. Sprinkle with finely chopped celery, then with finely chopped parsley. Mix two tablespoons each tarragon and cider vinegar and four tablespoons olive oil, and add one slice lemon cut one-third inch thick. Bring to boiling point, pour over potatoes, cover, and let stand in oven until thoroughly warmed.

Cold Potato Salad.—Cut cold boiled potatoes into small cubes. Dress with French dressing or a dressing made of three tablespoons of melted butter, one tablespoon of vinegar and one-half teaspoon salt. Chill. Cut celery, cucumber and hardcooked eggs into small pieces and add to the potato. Add a generous quantity of boiled salad dressing and mix all carefully, using a fork. Shredded cabbage, green pepper, onion, etc., may be added or substituted in the salad.

BREAD.

Essentials of Bread-Making.—Four things are essential to good bread-making: good flour, good yeast, careful mixing and kneading, and careful baking. In selecting flour for bread choose a creamy rather than a snow white one. It should have a gritty feeling when rubbed between the fingers.

How Bread Is Made Light.—The rising of bread is caused by the setting free of carbon dioxide gas within the dough. This gas, as it is formed, expands and stretches the dough. The yeast should be evenly distributed through the dough. This is one

reason why the dough should be kneaded well. The carbon dioxide may be produced by the fermentation caused by yeast, or by chemical action resulting from bringing together two such substances as soda and sour milk. The yeast which is used in making bread is a microscopically small plant called a fungus. A number of yeast fungi are put into dough and kept warm so that they will multiply, act on the dough, and generate the carbon dioxide. When enough yeast plants have been developed and gas produced to make the dough light, it is cooked to kill the fungi.

Bread.—One cup scalded milk, one cup boiling water, one tablespoon lard, one and one-half teaspoons salt, one cake of compressed yeast dissolved in one-fourth cup luke-warm water, one tablespoon sugar, six or more cups sifted flour.

Dry yeast may also be used. It is prepared as follows:

Dissolve the yeast cake and sugar in luke-warm water. Put butter and salt in a perfectly clean pan or bowl, and add the milk and water, or all water may be used. Cool to luke-warm, add dissolved yeast cake, and sift in part of the flour, beat until the batter is light and porous-looking; this will save time in kneading. Add the remainder of the flour, mix well, and, unless the dough can be gathered in a ball on the end of a spoon, more flour is necessary. Turn out on a floured bread board and knead well. The object in kneading bread is to make the gluten in the flour elastic and distribute the yeast evenly. Bread is kneaded sufficiently when it is elastic to the touch, has bubbles on the surface, and does not stick to the board. Press the finger lightly in the dough; if elastic it will spring back into place when pressure is removed.

Put the dough in a clean bowl, lightly buttered or dampened with cold water, and brush a little water over the top to prevent a crust forming, cover with a clean cloth kept for that purpose, and set in a warm place to rise. When it has doubled its original size, remove to the board, again knead for a few minutes, and divide into loaves. Put each loaf in a greased pan, cover, and let it rise until it has again doubled in size. If it rises too long, it is likely to be sour and be full of large holes. If it does not rise enough, it will be heavy and soggy. It is always better

to bake each loaf in a separate pan. This will insure thorough baking and brown crust on all sides. The quantity given in this recipe will make two medium-sized loaves. It can be made and baked in five hours. By starting the bread early in the morning, the bread can be made and baked by the time dinner is over. If it is made up at bedtime, and allowed to rise over night, one yeast cake will make twice the amount given in the recipe. In warm weather, however, there is danger of the bread rising too rapidly and of souring.

Baking Bread.—Bread is baked to kill the yeast plant and stop fermentation; to cook the starch, so that it will be thoroughly digestible; to improve the flavor; and to form a brown crust. The oven should be hot when the bread is first put into it. Turn the pans frequently the first six or eight minutes, so that the loaves will be even. At the end of fifteen minutes the loaves should begin to brown. Reduce the heat gradually. At the end of a half-hour the loaves should be well browned. Let them remain for another half hour, but have a very moderate oven to complete the baking. Remove from the pans at once and stand on end until thoroughly cold. If bread is covered while warm, the crust will be soft instead of crisp. When thoroughly cold put away in a tightly covered jar or tin box.

Some of the dough may be removed after the first rising, made into rolls, and baked for dinner or supper. They must rise until very light, but if they are ready to bake before it is time to use them, put them in the ice box or in a cool place to prevent the further growth of the yeast.

Dry Yeast.—Yeast foam or magic yeast is also used in bread making. The dry cake is soaked in warm water, and added to the following mixture: Dice or mash four potatoes, add one cup flour and enough hot water in which the potatoes were boiled to make a soft paste. Cool to luke-warm and add yeast. Allow it to stand and ferment. This takes from four to six hours. This yeast is best made at noon if bread is to be sponged at night or made at noon or at night if bread is sponged in the morning. The one cake of dry yeast is equal in strength to one cake of compressed yeast. When light it may be added to the bread sponge or kept in cool place until needed.

Muffins.—One-fourth cup butter, one tablespoon sugar, one egg, one cup milk, two cups flour, four teaspoons baking powder, one teaspoon salt. Cream butter with stiff-handled tablespoon. Cream it until the butter feels like wax. Add sugar and beat to a creamy mass. Add beaten egg and blend well with butter and sugar. Add milk gradually. Sift dry ingredients, add gradually. Beat until smooth. Butter muffin pans well and fill them three-fourths full. Bake twenty-five minutes in an oven that is hot enough to brown paper in eight minutes.

Biscuits.—Two cups flour, four teaspoons baking powder, one teaspoon salt, two to four tablespoons fat, three-fourths cup sweet milk and water, or all water or all milk.

Mix dry ingredients and sift. Work in fat with the tips of fingers; add gradually the liquid, mixing with a knife or a wooden spoon to a soft dough. It is impossible to state the exact amount of liquid required, owing to differences in flours. Toss on a floured bread board, pat, and roll lightly to one-half inch thickness. Shape with a biscuit cutter. Place on buttered pan, and bake in hot oven twelve or fifteen minutes. If baked in too slow an oven the gas will escape before it has done its work, and biscuits will not rise sufficiently. If sour milk, sour cream, or buttermilk is to be used, use one-half teaspoon of soda to each cup of liquid, and one teaspoon of baking powder.

DESSERTS.

Steamed Custard.—One quart milk, six egg yolks, two-thirds cup sugar, one-fourth teaspoon salt, one teaspoon vanilla.

Scald milk. Beat yolks slightly, add sugar, beat thoroughly. Dilute with a little of the milk, and add to the remainder of milk. Cook over hot water until the mixture will thinly coat a spoon. Stir while cooking; add vanilla. Cool. The whites of three eggs may be beaten stiff and folded in just before taking from fire, if desired.

Baked Custard.—One quart milk, three to five eggs, two-thirds cup sugar, one-fourth cup sugar, one-fourth teaspoon salt, one teaspoon vanilla, grating of nutmeg.

Beat eggs until yolks and whites are well mixed, add sugar, salt, nutmeg and milk. Strain into buttered baking dish or in-

dividual cups. Set dishes in pan of boiling water while baking. When done a silver knife stuck into the custard will come clean.

Dried Fruits.—Canned fruits and dried fruits, such as prunes, apricots, peaches, apples, should be used in winter freely. The dried fruit should be washed, picked over, always soaked over night in water, and cooked until tender in the same water, sugar being added just before taking the fruit up. If the fruit is cooked long in the sugar it becomes tough. If the fruit is not soaked before cooking, it will not be so plump and tender.

Wholesome Substitutes for Unwholesome Pies. 1. *Rice and Fruit.*—Line a bowl with left-over rice that has been slightly sweetened. Cover rice with apple sauce or other fruit sauce or stewed fruit. Serve with cream, plain or whipped, or boiled custard.

Blackberry Fool.—Trim crust from some good bread, slice, spread thinly with butter. Put a layer of bread in a bowl, cover with blackberries which have been stewed in enough water to cover until ready to fall to pieces and sweetened to taste. Add another layer of bread, cover with berries as before, using all the juice. Let stand for an hour before serving. Serve with cream. Other fruits may be used in the same way.

Cookies.—One-half cup butter, one cup sugar, one egg, one-fourth cup milk, two teaspoons baking powder, three cups flour, or enough to make dough easily rolled out, one-half teaspoon vanilla, nutmeg. Sift flour and other dry ingredients together. Cream butter and sugar thoroughly. Add yolk slightly beaten, then a little milk, and vanilla, and a part of the flour. Add milk and flour alternately till both are used. Fold in the egg white beaten stiff. When dough is stiff enough to roll, turn out on a floured board, and with a floured rolling-pin roll one-fourth inch thick. Sprinkle with nutmeg; cut with biscuit cutter and place in shallow pans. Bake fifteen minutes in hot oven.

Indian Pudding.—Five cups scalded milk, one-half cup Indian meal, one-half cup molasses, one teaspoon salt, one teaspoon ginger.

Pour milk slowly on meal, cook in double boiler twenty minutes, add molasses, salt, and ginger; pour into buttered pudding

dish and bake two hours in slow oven; serve with cream. (If baked too rapidly it will whey.) Ginger may be omitted, if objected to.

Poor Man's Pudding.—Four cups milk, one-half cup rice, one-half cup molasses, one-half teaspoon salt, one-half teaspoon cinnamon, one tablespoon butter.

Wash rice, mix ingredients, and pour into buttered pudding dish; bake three hours in very slow oven, stirring three times during first hour of baking to prevent rice from settling.

Bread Pudding.—Two cups stale bread crumbs, one quart scalded milk, one-third cup sugar, one-fourth cup melted butter, two eggs, one-half teaspoon salt, one teaspoon vanilla or one-fourth teaspoon spice.

Soak bread crumbs in milk, set aside until cool; add sugar, butter, eggs slightly beaten, salt, and flavoring; bake one hour in buttered pudding dish in slow oven; serve with vanilla sauce. In preparing bread crumbs for puddings avoid using outside crusts. With a coarse grater there need be but little waste.

Bread Pudding.—One cup flour, one teaspoon baking powder, one teaspoon soda, one-half cup sugar, one pint dry bread crumbs, one cup molasses, one teaspoon melted butter, two lightly beaten eggs, one cup hot water, one-half cup currants or raisins.

Sift flour, soda and baking powder and add remaining materials in order given. Steam one hour. Serve with the following sauce:

Hard Sauce.—One cup powdered sugar, one egg white, one tablespoon butter. Mix thoroughly together.

Bread and Butter Apple Pudding.—Cover bottom of a shallow baking dish with apple sauce. Cut stale bread in one-third inch slices spread with softened butter, and cut in triangular shaped pieces; then arrange closely together over apple. Sprinkle generously with sugar, to which is added a few drops of vanilla. Bake in a moderate oven and serve with cream.

Cottage Pudding.—One-third cup butter, two-thirds cup sugar, one egg, one cup milk, two and one-fourth cups flour, four teaspoons baking powder, one-half teaspoon salt.

Cream butter, add sugar gradually, and egg well beaten; mix

and sift flour, baking powder, and salt; add alternately with milk to first mixture; turn into buttered cake pan; bake thirty-five minutes. Serve with vanilla or hard sauce.

Peach or Apple Short Cake.—Fill a deep pie tin with sliced peaches or apples. Make a baking powder crust using one cup flour, two teaspoons baking powder, one-half teaspoon salt, two tablespoons lard or butter, three-eighths cup milk.

Sift together baking powder, salt and flour, rub in the fat and add the milk, stirring as little as possible. Toss on a board and roll out large enough to fit the outside edges of the pan. Cut openings at the top to allow the steam to escape. Bake 20-25 minutes. Serve with butter and sugar or cream and sugar.

Cereal Pudding.—Two cups cooked cereal (use left-over cereal), one egg beaten, one ounce chocolate (melted), two tablespoons butter, one-third cup sugar, one cup milk (possibly more).

Mix together the materials and bake in a buttered baking-dish about 20 minutes (cream of wheat, wheatina, malt or any of the fine cereals are suitable for the pudding). Serve with cream. The pudding is good without the chocolate and it may be omitted to make a more economical dessert.

CEREALS.

In general cereals should be cooked as follows:

Have the water rapidly boiling. Add one teaspoon of salt for each cup of cereal. Sprinkle the cereal slowly into the water, stirring till it is well mixed, and boil for five minutes. Continue the cooking without stirring either in a double boiler or with a piece of asbestos under the sauce pan. A double boiler may be made by fitting together two sauce pans nearly the same size, putting the larger one on top.

The fireless cooker is excellent for cereals. Add cereal to boiling salted water. Boil ten minutes. Put in cooker and allow to stand over night.

Dates, cooked prunes or other fruit cut into small pieces may be stirred into the cereal before serving.

TABLE FOR COOKING CEREAL.

Cook 5-10 minutes on fire, remaining time required in double boiler or over night in fireless cooker.

Kind	Quantity	Water	Time
Steam cooked and rolled oats } as	1 cup	1 $\frac{1}{4}$ -2 cups	1 to 2 hours
Quaker Oats.....			
Rolled Oats.....			
H. O.....			
Steam cooked and rolled } wheat as	1 cup	1 $\frac{1}{4}$ -1 $\frac{1}{2}$ cups	45 minutes to 1 $\frac{1}{2}$ hours
Pettijohn			
Rye flakes.....			
Old grist mill.....			
Rice (steamed).....	1 cup	3 cups	45-60 min.
Rice (boiled).....	1 cup	8 cups (excess)	30 minutes
Indian meal.....	1 cup	3 $\frac{1}{2}$ cups	3 hours
Oatmeal (course).....	1 cup	4 cups	3 hours
Hominy	1 cup	4 cups	1 hour
Wheatina	1 cup	4 cups	30 minutes
Cream of Wheat.....			
Malt			

RECIPES FOR FIRELESS COOKER.

General directions for using the fireless cooker:

1. Prepare the food to be cooked in the ordinary way.
2. Put it into the fireless cooker pail.
3. Cook over the fire until thoroughly heated, from 20 minutes to 1 hour, depending on the food, and put at once into the cooker.
4. The following gives the time for cooking some of the commonest foods:

	Over the Fire.	In Fireless Cooker
Cereals	10 minutes	2-3 hours or over night
Ham	60 minutes	6-8 hours
Corned beef.....	45 minutes	4-5 hours
Stew	20 minutes	4-5 hours
Dried fruits.....	10 minutes	2-3 hours

Cereals that are to be served for breakfast are best when left over night in the cooker; they are then ready to be served in the morning.

Split Pea Soup.—Wash and put one pint of split peas in the kettle, add 2 pounds beef, and a few bones, half tablespoon salt,

and sufficient water to cover all; set over the fire. As soon as it begins to boil, add a handful celery and 2 onions; cook 20 minutes, place the kettle in the cooker and cover quickly. Three hours later run the soup through a sieve into a saucepan and return it to the fire. Melt a tablespoon butter, add 1 tablespoon flour, stir two minutes, add it to the soup, cook a few minutes, add the necessary salt and 1 tablespoon each of fine chopped parsley and fine chopped celery. Serve with small croutons.

Corned Beef.—Wash and soak 6 pounds corned beef in cold water for a few hours. Place the kettle with enough water to cover the corned beef on the fire; when it comes to a boil, put the corned beef in the kettle. After boiling 30 minutes, place the kettle into the fireless cooker, cover quickly and let stand five hours. If cabbage is to be cooked with the corned beef, cut a cabbage into quarters and put it in the kettle with the corned beef.

Boiled Tongue.—Soak a smoked tongue over night in cold water, and next morning put the tongue in the kettle, cover with cold water, place over fire and boil 30 minutes, then place the kettle in the cooker and cover quickly. Six hours later take out the tongue, free it from skin, return it to the kettle and let it cool in the broth.

Boiled Fowl.—Put a well cleaned fowl in the kettle, cover with boiling water, add 2 onions, 1 teaspoonful pepper, 1 tablespoonful salt, and boil 20 minutes, set the kettle in the cooker, cover quickly, let stand for about four hours. Serve with the following sauce: Melt 2 tablespoonfuls butter, add 2 heaping tablespoonfuls our, add to the liquor in which the chicken was cooked, stir and boil till smooth, strain, season if necessary with salt, and serve with the chicken. Young chicken will cook in two hours.

Boiled Mutton.—Put the kettle, with enough water to cover the mutton, over the fire. When it boils put in leg of mutton, add 1 tablespoonful salt, and 2 onions, boil 20 minutes, place the kettle in the cooker, let it remain 5 hours, serve with gravy made by thickening the liquid.

Baked Beans.—Soak 1 quart dried beans in cold water over night. Put them in the kettle, add 1 pound salt pork, and cover with cold water. Place the kettle over the fire, boil 20 minutes, then put the kettle in the cooker; cover quickly; let stand 5 hours; lift out the kettle, turn the beans into a pan, add 3 tablespoonfuls molasses, one-half teaspoonful salt, one-fourth teaspoon pepper, mix all together with a fork, gash the pork rind and lay in the center of dish. Set the pan in hot oven and bake half an hour or until brown.

Boiled Ham.—Wash well a smoked ham of 12 pounds in weight, put the kettle with enough water to cover the ham over the fire; when it comes to a boil, put the ham into the kettle, boil 25 minutes, then place the kettle in the cooker, cover quickly and let stand 5 hours. (A ham of 16 pounds will require 6 hours.) Uncover and let the ham cool in the water. Smoked hams are better when soaked in the water over night.

Prunes.—Wash prunes, and soak for several hours in cold water. Add more water if necessary to cover prunes and bring to a boil. Boil 10 minutes. Then place the pot in the cooker. Let stand 2 hours or longer. Remove and sweeten if desired.

Stewed Apricots.—Soak one pound dried apricots for several hours in cold water. Cook as directed for prunes. All dried fruits should be soaked, cooked in the same water, and then sweetened. This prevents the skin from becoming tough.

DEPARTMENT OF EXTENSION

Edwin Du Bois Shurter, Ph. B., Acting Director of the Department.

Sam C. Polk, Secretary of the Department.
